Water Treat

Chemical Process Industry

The production of chemicals and basic industrial products require treated water as part of the product, the rinse of the product or heat exchange of the product or facility. In each case, the GF Piping Systems solutions from SYGEF® (PVDF) to PVC-U offer economical corrosion-free piping to process the water. GF Piping Systems products offer clean, inert materials that ensure the highest grade of water for all phases of water treatment and water distribution.

Water Treatment Systems for production of high purity water are needed to feed boilers, cooling systems and pre-treatment. The most appropriate GF Piping Systems PVC-U and PVC-C offer corrosion free and price competitive alternatives to metallic piping systems.

GF Piping Systems and instruments play a major role in transporting water and measuring flow, pH, conductivity and ORP throughout chemical, paper, automotive and power generating plants.

PVC-C in Chemical Industry.

Food and Beverage

Whether in water treatment systems, feeding boilers, cooling systems or the simple piping to the filler, GF Piping Systems fittings, valves and instrumentation offer an advanced and competitive solution.

For the state of the art manufacturing of "new age" drinks as well as traditional carbonated drinks GF Piping Systems high purity piping products (SYGEF® (PVDF), PROGEF® (PP-n) and PP-H) offer easy cleanable solutions.

Either with a traditional lime-treated, ferric flocculation water treatment process that results in elevated pH product water or with membrane systems that often produce a more acidic, poorly buffered product water, the use of GF Piping Systems plastic piping plays a critical role in preventing piping corrosion for handling these aggressive ingredient waters.

Demineralisation System in PVC.

Life Science

New biotech products, cosmetics and pharmaceuticals are requiring higher quality water for the manufacture of a wide range of products from sun tan lotion to parenteral (WFI). GF SYGEF® (PVDF) and GF® PROGEF® (PP-N) piping with GF Piping Systems fusion technologies are creating the ability to produce pharmaceutical grade water without stainless steel roughing. The GF Piping Systems state-of-the-art welding technology (BCF) provides a smoother surface than an orbital weld.

GF Piping Systems eliminates the need for passivation and as these aggressive techniques become more difficult to conduct from both an environmental and health point-of-view, the GF Piping Systems plastic alternative to sanitary and industrial stainless piping is the system of the future for the life sciences industry.

SYGEF® PVDF with BCF® fusion in Pharmaceutical Chemical dosing application.

atment

Microelectronics

With today's advanced semiconductor manufacturing technologies, the water used for product rinsing and other critical manufacturing processes is more important than ever. GF Piping Systems SYGEF® (PVDF), GF Piping Systems PROGEF® (PP-n) and GF Piping Systems PP-H piping using GF Piping Systems fusion technologies make it possible to produce and maintain the highest purity water from a chemical (both organic and inorganic) and a biological standpoint. These inert piping materials allow the water distribution system to maintain its purity throughout the manufacturing facility.

For electronic circuits, GF Piping Systems PVC-U and PVC-C offer economical solutions to treat and distribute water for rinsing purposes where eliminating piping corrosion is the greatest concern. GF Piping Systems flow and analytical instruments and valving control offer complete systems for process water treatment distribution and neutralization of wastewater.

SYGEF® PVDF with IR® welding in the Semiconductor Industry.

Ship Building

The key in ship building is to use the materials of the lightest weight, with extensive piping systems found on all vessels, especially cruise ships, piping materials from GF Piping Systems are meeting the low weight demands, while eliminating the corrosion that is an inherent handicap to all metallic products used to build sea-going vessels.

The process of desalination, softening, Reverse Osmosis and chemical dosing will be beneficially accomplished with our combination of plastic valves, fittings, pipes, measurement and control systems.

Water Treatment system for Ship Building with PVC-C and PE 100 piping and actuated valves for process control.

Municipal → Drinking Water & Waste Water

Aquaparks

Swimming pools, aquatic parks and aquariums need accurate, reliable and price advanced water treatment facilities. Adapted to the requirements we offer solutions securing fast installation and long-lasting performance.

Drinking Water Plants

For public utilities such as drinking water or municipal desalination plants, the challenge of corrosion is driven by high levels of chlorine, chlorine dioxide, salts or general exposure to the weather or ground water.

GF Piping Systems piping and instruments play a major role in transporting water, controlling and measuring flow, pH, conductivity and ORP throughout public water utilities without the risk of corrosion. GF Piping Systems has the package for the water works.

Waste Water Plants

Waste Water Plants must be built to last. Our total solutions, from valves to instrumentation are specially made for you. As a total package they offer added value solutions for all your needs.

Water Treatment

Visible benefits

Improving the quality of water in order to reduce its impact on processes and the environment is always a challenge.

In a wide competitive area of chemical and physical processes you need the right partner who will be able to bring you the solution and expertise for your complete piping system.

With our systems of fittings, pipes, valves automation and instrumentation with a high level of service quality we offer you know how, which will serve you to be more competitive in your market place.
