GF Piping Systems

The logo features a plus sign, the letters 'GF' in a bold, sans-serif font, and another plus sign, all in white.

## COOL-FIT 4.0 Taking the lead with superior technology

The fast, safe, pre-insulated piping system for industrial and commercial refrigeration applications

[www.gfps.com/cf4](http://www.gfps.com/cf4)

# A distinct head start for your production processes

**Ready, set, go –  
With COOL-FIT 4.0!  
Safe, efficient and swift,  
your recipe for success**

Faster installation, safer and more efficient production, offering long-term benefits: COOL-FIT 4.0 wins in every respect. The pre-insulated piping system made of plastic has a clear advantage over conventional systems made of metal.

Its winning strategy? A revolutionary design, modern materials and innovative jointing technology that set new records. Discover the benefits for your strategy to victory.

All comparisons: average values to conventional metal piping systems.

## 50 % faster installation thanks to pre-insulation

### Superior time and costs

COOL-FIT 4.0 components already come to you finished: The media pipe, insulation, and shell are permanently connected at the factory. Even fittings and valves are already pre-insulated. This makes subsequent insulation unnecessary and eliminates the need for a second team in many cases.

Electrofusion as modern jointing technology additionally accelerates the installation. Thus, you already save time and costs during installation.

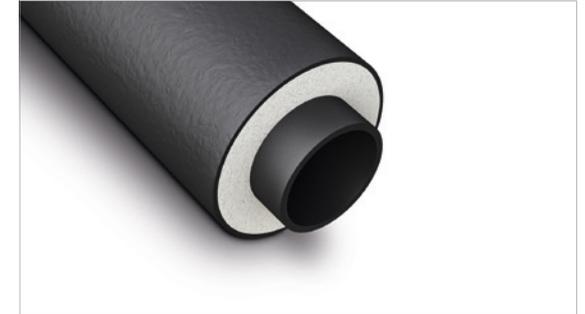

Electrofusion makes it possible to permanently connect pipes, fittings, and valves in just a few minutes.

## 30 % higher energy efficiency thanks to modern materials

### Score twofold

COOL-FIT 4.0 offers two material benefits in a single product: The low thermal conductivity of plastic coupled with the highly efficient foam insulation significantly

increase the energy efficiency of your system. This saves you energy costs and improves the environmental record of your systems.

COOL-FIT 4.0 is much more energy efficient than piping systems made of metal with subsequent foam insulation.

## 100 % maintenance-free plastic

### Highest performance in the long run

The media pipe, insulation and shell consist of high-quality plastics. This means that COOL-FIT 4.0 is corrosion-free and maintenance-free for the entire service life of your system – which is at least 25 years.

Another benefit of plastic: The particularly smooth inner surfaces prevent deposits, and thus additional pressure losses.
