**Let's talk about...**

### **GF Piping Systems focuses on efficient HVAC processes in a new digital event**

**On the road to a more sustainable future, the efficiency of cooling and refrigeration processes plays a major role. GF Piping Systems will address this issue in a two-part digital event that guides participants through the planning phase of HVAC systems as well as industrial and process cooling installations. "Let's talk about..." will take place on October 18 and 19, 2022 in the DACH region, Italy, and Spain.**

The world is becoming ever more reliant on HVAC technology. Due to climate change and rising population numbers, it is estimated that the number of air conditioning units in buildings will reach 5,6 billion by 2050. Additionally, many industries use HVAC for process cooling in applications such as data centers or manufacturing. Reducing CO2 and greenhouse gas emissions caused by cooling and refrigeration technology has therefore become a priority.

As a supplier of piping solutions for a wide range of HVAC applications, GF Piping Systems will address this challenge with a two-part digital event series. "Let's talk about..." has been developed in collaboration with Trane, a leading provider of air conditioning solutions, and will focus on the planning phase of sustainable cooling and refrigeration, both for HVAC in buildings as well as industrial and process cooling.

"Let's talk about..." takes place on October 18 and 19 and will consist of two sessions in every local language. These sessions will feature experts from GF Piping Systems and Trane who will share their knowledge and answer questions by participants. Hosts for "Let's talk about..." include René Habers, Head of Marketing and Communications Central and Eastern Europe at GF Piping Systems Germany, Cinzia Lori, HLK engineer and Marketing Manager at GF Piping Systems Italy, and Marcos Agüero, Technical Area Sales (Industry) at GF Piping Systems Spain.

"We are looking forward to sharing our experience with planners and engineers", comments Kevin Blumberg, Senior Business Development Manager Cooling at GF Piping Systems. "Under our guiding principle of 'Improving Energy Efficiency for Life', we want to shine a spotlight on the efficient cooling solutions of today and show that sustainability starts in the planning phase. We believe that it is possible to provide modern and reliable HVAC technology while also meeting the environmental challenges of the future."

**"Let's talk about..." takes place on October 18 and 19, 2022. Sign up for your local sessions here:**

**GF Piping Systems**

As the leading flow solutions provider for the safe and sustainable transport of fluids, GF Piping Systems creates connections for life. The division focuses on industry-leading leak-free piping solutions for numerous demanding end-market segments. Its strong focus on customer-centricity and innovation is reflected by its global sales, service, and manufacturing footprint and its award-winning portfolio, including fittings, valves, pipes, automation, fabrication, and jointing technologies.

GF Piping Systems has its own sales companies in 31 countries, which means it is always by its customers' side. Production sites in 36 locations in America, Europe, and Asia ensure sufficient availability and quick, reliable delivery. In 2021, GF Piping Systems generated sales of CHF 1'971 million and employed 7'686 people. GF Piping Systems is a division of Georg Fischer AG, founded in 1802 and headquartered in Schaffhausen, Switzerland.
