SEMICON Taiwan 2022

GF Piping Systems to show complete solutions for the semiconductor industry

The SEMICON trade fair in Taiwan is the most influential semiconductor event in the world and aims to lead technology trends, innovation, and collaboration. Between September 14 and 16, GF Piping Systems will use SEMICON 2022 as a platform introduce new off-site prefabrication capabilities, show complete solutions for process automation, and demonstrate specialized products such as ultrasonic non-destructive testing.

Within a market that is becoming more and more competitive, the semiconductor industry relies on suppliers to provide technology that makes manufacturing efficient, safe, and reliable. This particularly applies to the piping systems that transport anything from chemicals to process water. At SEMICON 2022, Swiss flow solutions provider GF Piping Systems will introduce new offsite prefabrication capabilities at OSM Taiwan for plastic piping components. It is a customer-oriented answer to overcome challenges such as shortages of skilled labor, time constraints, cost overruns, quality concerns, and space limitations on construction sites. The facility is the newest of GF Piping Systems' prefabrication sites, one of more than a dozen in total with the same standards around the world.

In addition, GF Piping Systems will show a wide range of products that allow manufacturers to automate their production processes. The Ball Valves 546 Pro and 543 Pro are designed for mixing and distribution processes and can be paired with electric and pneumatic actuators as well as electro-pneumatic positioners. GF Piping Systems will also showcase its zero dead leg and completely corrosion-free PVDF T-Diaphragm Valve 519 engineered for ultra pure water production. Furthermore, the company will demonstrate ultrasonic non-destructive testing which allows pipe welds to be efficiently analyzed on-site.

Richard Trevaskis, Head of Global Industries at GF Piping Systems, looks forward to the Taiwanese trade fair: "The semiconductor industry is becoming increasingly important throughout the world. At SEMICON 2022, we therefore want to introduce customers to our new prefabrication and engineering capabilities in Taiwan. We create connections for life by combining prefabrication with our industrial process automation solutions as we offer companies in the region high-quality, efficient, safe, and long-lasting plastic piping systems."

About GF Piping Systems

As the leading flow solutions provider for the safe and sustainable transport of fluids, GF Piping Systems creates connections for life. The division focuses on industry-leading leak-free piping solutions for numerous demanding end-market segments. Its strong focus on customer-centricity and innovation is reflected by its global sales, service, and manufacturing footprint and its award-winning portfolio, including fittings, valves, pipes, automation, fabrication, and jointing technologies.

GF Piping Systems has its own sales companies in 31 countries, which means it is always by its customers' side. Production sites in 36 locations in America, Europe, and Asia ensure sufficient availability and quick, reliable delivery. In 2021, GF Piping Systems generated sales of CHF 1'971 million and employed 7'686 people. GF Piping Systems is a division of Georg Fischer AG, founded in 1802 and headquartered in Schaffhausen, Switzerland.
