Customizing
made in
Schaffhausen

Special solutions

We focus on our customers

Decades of experience and know-how is the best guarantee of quality

The Georg Fischer name stands for reliability and durability – and has done so for over 200 years. We develop and produce pipes, fittings, manual and actuated valves, measurement and control devices as well as fusion machines. Our products guarantee the best quality available, continuous innovation and outstanding functionality.

Customizing

With global expertise in a wide array of application areas, GF Piping Systems meets the growing demand for comprehensive solutions from one source. This applies not only to our standard product range, but also to special components. The Customizing

Team manufactures special designs on request, to ideally complete your systems. Expert service and individual support are the hallmarks of our customer relationships.

Innovation and technology

Besides developing new products, research at GF Piping Systems also focuses on optimizing existing products. We strive to offer our customers the best solution in every case. That is why the technologies we develop always set new benchmarks. Our customers benefit directly from this technological edge.

Quality management

The high quality of the products is ensured by our quality management system according to ISO 9001:2000. Components and systems are tested in our own accredited Test Laboratory.

At your service

The Customizing & Service Operations (CSO) at GF Piping Systems is a dynamic and highly motivated team, composed of specialists and engineers. They possess extensive know-how in the field of components manufacturing, particularly in the wide spectrum of thermoplastic

materials.

The Customizing Team produces custom-made, individual piping components according to customer specifications – whether in small batches or as single parts. We offer our customers a comprehensive service: from technical support and design to production, assembly of prefabri-

cated components, not to mention fast and reliable delivery thanks to our immediate vicinity to the Distribution Center. We also manufacture infrared and BCF fusion machines, in addition to repairing and renting these machines.

Our solutions guarantee your success

Specialized skills are our qualification

One-stop shopping for system solutions

The focus here is on customized production of special system components. Manufacturing special components in plastic and metal requires professional engineering skills, outstanding know-how and state-of-the-art production technology.

Customer-oriented process management

Our experienced team of specialists adheres to a customer-oriented process management from the very start. We seek intensive dialog with our customers, work out the optimal solution and handle construction of the special parts. If necessary, specifications (parts drawing and parameters) are drawn up according to customer requirements. We can build special components on the basis of drawings, CAD data or samples. If desired, a technical feasibility test is also conducted.

As an additional service, finite element method (FEM simulation) calculations can be made.

Cost-effective benefits

The Customizing Team in Schaffhausen has direct access to the Research and Development Department, as well as Production and Distribution Center. We work closely together with our ISO/IEC 17025 accredited Test Lab. An inventory of semi-finished products and the rapid availability of small parts thanks to direct access to the single parts stock in the Distribution Center saves valuable time in manufacturing customized components. All this adds up to customer benefits that create added value and offer a distinctive competitive edge.

All-inclusive quality assurance

Like all products that are manufactured at GF Piping Systems, customized components are produced according to ISO 9001:2000. The custom-made products leave our plant marked with detailed production data. In this way, we guarantee the traceability of each article, once again setting standards in the industry.

Response within 24 hours

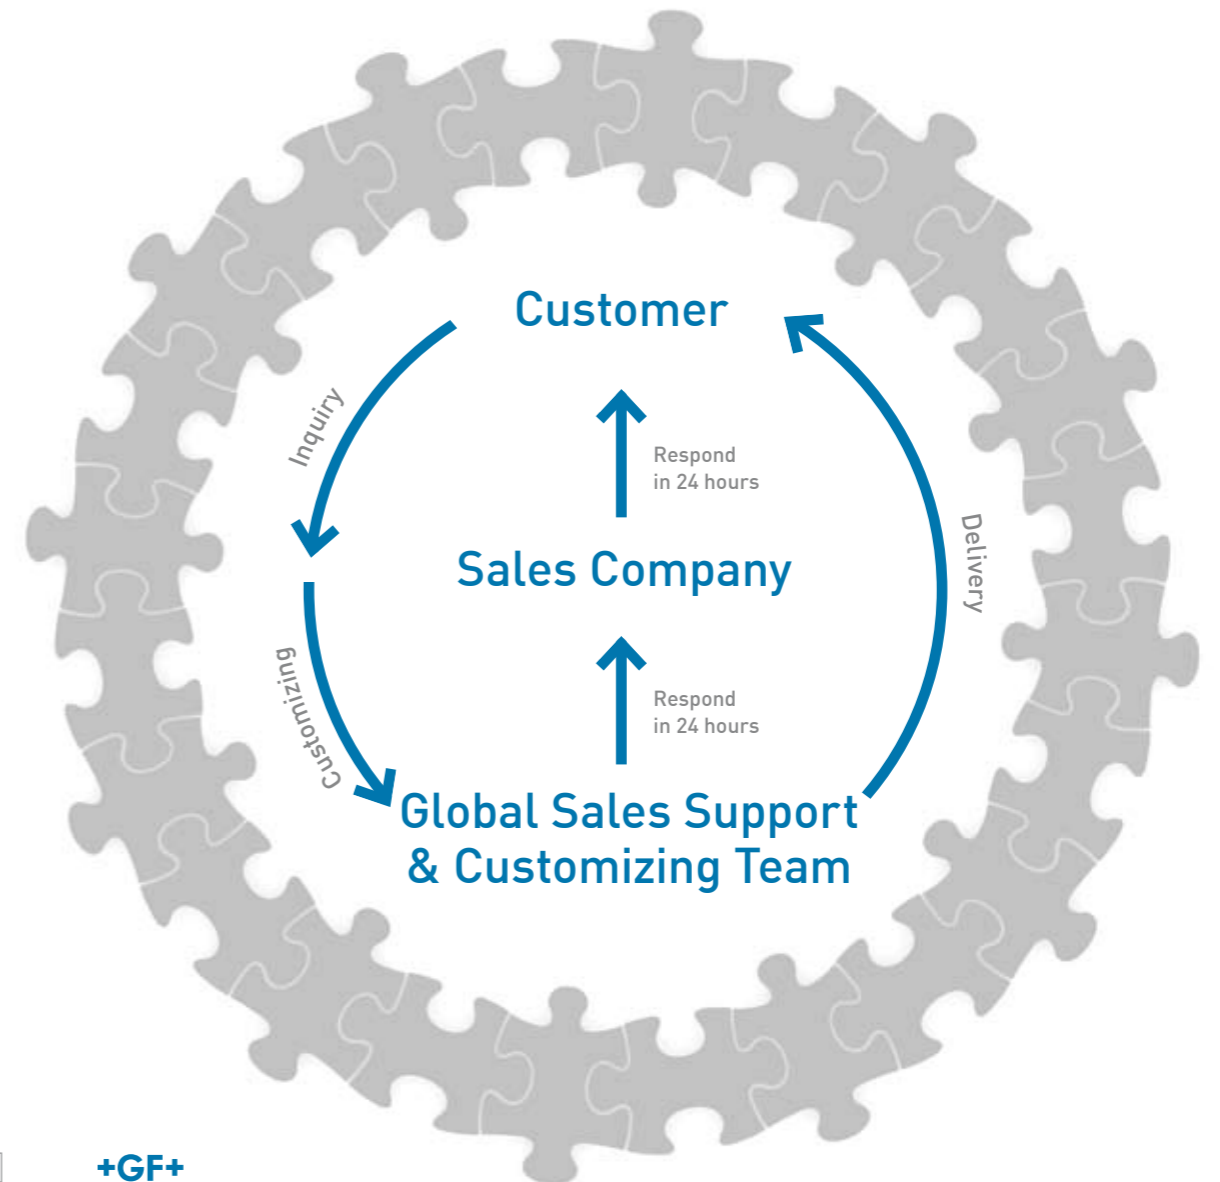

As a leading global manufacturer of piping systems, GF Piping Systems is represented worldwide. Our sales companies are competent local partners, who will establish contact to the Customizing Team for you through our Global Sales Support. We aim to respond to every inquiry within 24 hours.

This proximity to our customers allows us to produce customized articles rapidly and in an uncomplicated process.

Specialized in special challenges

Finding creative and professional solutions for technological challenges is daily business for us in Customizing. When looking

for new and specific solutions, it is of course necessary to think outside of the box and to try new approaches. We produce excellent results, thereby contributing to the long-term success of our customers. The Customizing Team believes that the ideal, custom-made solution is always also the most cost-efficient solution.

We offer precision in every dimension

Exceptional scope of performance

The Customizing Team offers exceptional performance with trendsetting concepts and an encompassing range of services.

Whole portfolio of services

The Customizing Team has a truly exceptional scope of performance. We offer our services to industry, water and gas utilities and building technology. Thanks to our modern machinery and highly qualified staff, we execute orders for many different market segments. In addition to components machining, the Customizing Team also focuses on jointing technologies, such as fusion and solvent cementing. We put together subassemblies and mount actuated and manual valves for special applications as well.

Larger dimensions

Our customized articles, prototypes and small series comply with the highest quality requirements, as do all the standard products of GF Piping Systems. The Customizing Team manufactures special products, from the smallest dimensions up to diameters of 500 mm. Larger dimensions are also possible on request. For projects in micro-electronics or the pharmaceutical industry, we work with materials in clean room quality – in accordance with our SYGEF and PROGEF specifications.

Modern production technology

We work with all the conventional materials and in keeping with strict deadlines, we guarantee fast and reliable production and delivery of customized articles.

Our scope of machining options for plastic and metal include CNC lathing and milling as well as state-of-the-art jointing technology for our plastic piping materials. They are:

- conventional butt and socket fusion (PE, PP, PVDF, PB)
- infrared fusion (PFA as well)
- BCF (bead and crevice-free fusion)
- electrofusion (PE, PB)
- solvent cementing (PVC-U, PVC-C, ABS)

We find the missing piece

The mission of GF Piping Systems is to offer complete system solutions from one source. And in taking on the problems and special requests of our customers, the Customizing Team represents an important part of this mission. The dedicated and motivated team of specialists delivers outstanding results with the customized products or small series. We secure the long-term success of our customers with our individual and economical solutions.
