

## TEPPFA Members Declaration Regarding the use of Polyolefin Recyclate

In order to demonstrate and ensure the integrity of pipe and fittings manufactured by TEPPFA and National Association member companies a standard declaration has been established to allow members to acknowledge their commitment to responsible sourcing and control of materials

In signing this declaration a member company gives a written undertaking to adhere to the following Code of Practice:

- All pressure and non-pressure products manufactured to the relevant EN Product Standards or National Standards will only contain materials sourced strictly in accordance with the requirements of that Standard
- Rigorous quality control measures will be maintained during production to prevent recycled materials not allowed within the relevant product standard from entering the feedstock for such products.
- When recycled materials are used for the manufacture of other products which currently fall outside recognised product standards all necessary safeguards will be put in place to prevent such material being misused for other products

### Company Declaration

We hereby commit to the TEPPFA Code of Practice for the use of recycled materials.

Signed: 

Name: Dr. Nabil El Barbari

Position within Company: VP Technology, Quality & Sustainability

Company: Georg Fischer Piping Systems Ltd.

Date: 17.05.2013
