Plastic Piping Systems
→ Solutions for Building Services

Building Services

Builders of nonresidential buildings, such as hotels, hospitals or industrial plants, want comprehensive solutions that are economical and ecological.

While industrial plants focus on smoothly running production processes, hospitals tend to emphasize hygiene and comfort. And for hotels, quiet and relaxation are major priorities, closely followed by the safety requirements.

Our wide range of materials and innovative systems provide you with the freedom and ease of planning all your building projects and installations – exactly as you want them to be. We attach great importance to safety, environmental protection, longevity and cost effectiveness.

→ Your benefits at a glance

Our long-term expertise and our individual system solutions for gas and liquid conveyance in industrial buildings means you benefit from a professional partner for application-orientated plastic piping installations.

Barely noticeable, yet life saving in an emergency: fire protection is a basic necessity in all buildings. This is where sprinkler systems with malleable iron fittings from Georg Fischer come in.

Application field

Main Applications	Sub segment	Hotels	Industrial Buildings	Hospitals
		Public residences for business and leisure	Production facilities for all industries	Health care services
Hot & Cold Water		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
HVAC		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Fire Protection		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Compressed Air		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Water Transport		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Chemical Waste		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Vacuum		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Local expertise

Prefabrication

Hot and cold water distribution in INSTAFLEX®, iFit, PPR Aqua System

Chilled water supply Cool-Fit™, PE, ABS

→ Plastics do more

Peaceful surroundings and the well-being of guests are the primary concerns of every hotel operator. That is why all hotel components must run smoothly and trouble-free. Guests may not feel disturbed in any way.

A low-noise system for hot and cold water distribution provides exactly this comfort.

Also for air-conditioning and comfortable indoor temperatures, GF Piping Systems offers interesting solutions in plastics that satisfy all requirements.

→ Applications – Materials – Systems

Systems for drinking water and warm water distribution. Ecological and economical drinking water systems for every type of building are among the core competences of GF Piping Systems. Excellent customer relations enable us to identify market needs early and to set standards in the trade. Our plastic piping systems are hygienic, dependable solutions for your applications. Our pipes, fittings and valves are ideal for transporting water – because they are corrosion-free and prevent limescale deposits from forming. It is also virtually impossible for micro-organisms, such as legionella and other bacteria, to grow on the smooth inner surfaces of plastics. In addition, warm water plastic piping systems from GF Piping Systems withstand high temperatures for a short time, permitting chemical-free disinfection. Builders, operators and users alike benefit from a safe system in perfect working order and with a long service life.

Warmth that feels good. For an ideal indoor climate, low-temperature radiant heat is required. New low-temperature heating systems are conducive to the use of plastic piping from GF Piping Systems. We offer innovative comprehensive systems, providing you with all the hidden basic elements for comfortable warmth. And because water is the energy carrier, a safe transport system is decisive.

A pleasant ambiance for every season. In the heat of summer, air conditioning is practically indispensable. For example, in hospitals a comfortable climate contributes to the healing process and in hotels it means first-class comfort. The systems – whether designed for ceiling cooling with condensers or with activation systems installed in the ceiling – require water, which is cold in summer, hot in winter. We have exactly the right plastic piping system to fit your needs: pre-insulated, combined for hot and cold water distribution, installed in buildings, on the roof or in the ceiling.

Systems for conveyance of liquids, gases and vacuum. Industrial plants not only require distribution systems for hot and cold water, but for a number of other media as well. Production processes, for example, often require compressed air or vacuum. In such cases, the system must be 100% leakproof in order to prevent pressure loss. This requirement is satisfied completely with plastic piping systems. The smooth inner surface of the pipe reduces pressure loss; innovative and safe jointing technologies guarantee pressure-tight pipe connections. This gives you the peace of mind of smoothly running and economical processes and ensures the safety of your employees.

Mandatory for gas – uncompromising safety. Building renovation does not always entail the replacement of gas pipes. Crucial and equally critical is the connection between the pipe and the fitting. GF Piping Systems specializes in jointing technology and offers you safe, long-term and cost-effective solutions. Our safety guarantee is backed by the respective approvals and certifications – worldwide.

Fire Protection
Temperguss or INSTAFLEX®

Water transport system

GF Piping Systems

Supplying the world with clean water is one of the major challenges of the 21st century. GF Piping Systems rises to this challenge by providing high quality piping systems.

We develop and produce pipes, fittings, valves, flow measurement devices and fusion machines. These application-oriented system solutions allow transporting water, gas and industrial liquids safely and reliably. Whether in industry, utilities or building technology - GF Piping Systems has the right solution for you.

Innovation and technology. GF Piping Systems, through focussed research, is continually developing new products and technologies, setting new global standards in quality and performance for our customers.

All from one source. GF Piping Systems covers the growing demand for complete solutions from a single source in a wide range of applications.

Quality management. All system components are stringently tested in accredited test laboratories. Management and production procedures are certified to ISO 9001 and ISO 14001 to guarantee form, fit, function and compliance in whatever application they may be used throughout the world.

Sales and service – worldwide. Our local sales companies and representatives in over 100 countries provide “one stop” shopping, including planning support, training and product availability.

Facts and Figures. GF Piping Systems with its 3 500 employees achieves an annual turnover of about CHF 1 100 million. GF Piping Systems is part of the Georg Fischer Corporation, which was founded in Schaffhausen, Switzerland in 1802. Today the corporation has circa 13 000 employees and an annual turnover of CHF 4.5 billion.
